Professional Summary

Backend Software Engineer with **1.5 years** of experience in **Java, Spring Boot, Python, Django, and GraphQL**. Skilled in building **REST and GraphQL APIs**, applying clean code principles, and working with **cloud platforms (AWS, GCP)** and **Apache Kafka**. Strong problem-solving abilities, effective communication skills, and a product-oriented mindset, with experience working in agile development environments.

Technical Skills

Languages : Java, Python, SQL
Frameworks : Django Framework, Spring Framework, Spring MVC, Spring Boot, Sring Security, Spring Cloud, Hibernate
Tools & Technologies : Git, Github, Maven, AWS, Apache Kafka, REST API, GraphQL
Courseworks : OOPS, DBMS, Operating Systems, Computer Networks, Design Patterns, Data Structures, Microservices

Certifications

Apollo Graph Developer – Associate *October 2025*
AWS Academy Graduate *April 2023*

Experience

Software Engineer 1 | *HashedIn By Deloitte* *April 2024 – Present*

- Led development of a **Generative AI RAG-based** chatbot using a vector database to improve response accuracy and performance, leveraging **Python, FastAPI, PGVector, LangChain, Llama LLM, and Streamlit**.
- Developed a **Google Vertex AI connector** for Microsoft Teams and Outlook with **incremental and full data load** support, enabling downstream search and chatbot applications using **Java, Maven, Vertex AI, and GCP**.
- Contributed to a **multi-tenant staffing platform** with demand, resourcing, and bench management features using **Python, Django, Java, Spring Boot, GraphQL, and PostgreSQL**, including end-to-end feature development, bug fixes, and test coverage improvements.
- Actively collaborated with seniors and implemented **multi-tenancy middleware** with **feature gating**, enabling tenant-level configuration and scalable onboarding.
- Implemented **AWS Lambda Split for a modular-monolith architecture** and executed **database migrations** for two applications sharing a single Django server.
- Authored detailed **technical documentation** outlining multiple **design approaches, API specifications, and migration strategies**, and collaborated with architects for design reviews and alignment.
- Actively **supported peer teams during bandwidth constraints** and collaborated cross-functionally to enable analytics and agent support in the product through clear communication and high-quality API delivery.

Data Engineer Trainee | *Celebal Technologies* | **Certificate** *May 2023 – July 2023*

- During my internship at Celebal, I gained hands-on experience with **Python, SQL, Azure, Apache Spark, Databricks, and Azure Data Factory,** enhancing my data engineering skills and understanding of architectural practices like Data Warehouse, Data Lake, Delta Lake, and Azure Data Lake Storage.
- Leveraging these skills, I successfully developed comprehensive capstone projects, emphasizing practical application and problem-solving in real-world scenarios.

Education

Manipal University, Jaipur — **Bachelor of Technology in Computer Science** | CGPA : 8.95 — *2020 – 2024*
Nezamia Public School — **High School, CBSE** | Percentage : 91 — *2019 – 2020*

Projects

Hotel Microservices | ***Java, Spring Boot, Spring Cloud, MySQL, Spring Data, Microservices*** | **Github Link**

- Developed and managed **Microservices** (user, rating, and hotel services) to encapsulate business logic efficiently, enhancing modularity and scalability.
- Implemented key features of Microservices architecture, including **API Gateway** with Okta for centralized authentication, **Service Registry via Netflix Eureka**, and communication between Microservices using **Feign Client**. Employed **resilience patterns like CircuitBreaker, Retry, and RateLimiter** using resilience4j to ensure **fault tolerance** and robustness.

Food Ordering System | ***Java, Spring Boot, Spring Data, Postgres, Apache Kafka, Microservices***

- Designed and implemented a high-performance food ordering system using event-driven architectures based on **Apache Kafka. Employed Clean architecture, Domain-Driven Design (DDD), SAGA, Outbox patterns, and CQRS event-sourcing** for robustness and scalability.
- Orchestrated four primary microservices, namely Order-Service, Payment-Service, Restaurant-Service, and Customer-Service, adhering to **event-driven architectural principles**. These microservices facilitated seamless communication and efficient handling of complex business workflows within the system.
